

# Stanislaus Dental Society invites you to attend:

## Hands on Provisional & Single-Unit Crown Solution: Procedural Predictability & Restoration Longevity

Speaker: Troy Schmedding, DDS

Friday, August 21

Papapolloni's Bistro — 2501 McHenry Ave. Modesto

8:00am Full breakfast and registration

8:00am – 1:30pm (5 Hours Core CEU's)

Troy Schmedding, DDS has been a practicing cosmetic and restorative dentist for the last 25 years. He is a 1993 honors graduate from The University of the Pacific, Arthur A. Dugoni School of Dentistry. He currently maintains a private practice in Walnut Creek, California. Dr. Schmedding is also approximately one of 470 dentists world wide to achieve accreditation status in the American Academy of Cosmetic Dentistry. He also maintains a Diplomate status with the American Board of Cosmetic and Esthetic Dentistry. Dr. Schmedding also works with numerous manufacture's on implementation and testing of various restorative products being brought to market. He speaks and teaches nationally as well as internationally on both esthetic and restorative dentistry.

**Hands on Provisional:** Learn about *AND* use new temporary crown materials and processes. On average, a Dental Assistant takes 15-20 minutes to make a temporary crown that fits. Dr. Schmedding's presentation and hands-on training of Dentsply Sirona's provisional technique teaches participants to complete this procedure in *half the time*. That's 7-10 minutes – that's faster, easier, more efficient – which translates to a meaningful improvement in productivity and patient experience. *This hands-on workshop includes ALL materials and tools* needed to make a temporary *during the hands-on portion* based on the tips, techniques, materials reviewed by Dr. Schmedding during the lecture portion. Upon completion of this course, participants will:

- Be able to create a matrix allowing them to easily make a provisional that fits and requires less adjustment
- Be knowledgeable about techniques making the provisional process easier and faster
- Understand the importance of selecting the right material characteristics and tools for crown/bridge temporization
- Be aware of criteria for selection and use of dental cements

**The Single-unit Crown Procedure:** has a significant impact on the profitability of a restorative dental practice. By addressing the critical steps in the procedure, clinicians can deliver greater efficiency, more predictable clinical outcomes, enhanced auxiliary staff usage, and overall patient satisfaction. To achieve a strong foundation and long term success, clinicians need a solution that simplifies the steps within the procedure of preparation, provisionalization, impression-making, and cementation. The importance of fabricating a provisional and its impact within the procedure will be highlighted, as will troubleshooting of common problems when recording a final impression. In addition, definitive cement selection will be reviewed as it is critical to match the correct cement choice to the desired crown material to obtain optimum results for the procedure. Utilizing a case based approach, the steps of the single unit crown procedure will be analyzed to help provide a complete solution for overall restoration success, reliability, and longevity. This presentation is designed for the entire dental team.

**Register: !!Important!! You must provide contact information in case of unexpected changes!**
